## SUMMARY

I am a Data Engineer with 4 years of experience in building data-pipelines and analytics engineering using Python along with PostgreSQL and Snowflake. I am eligible for a **2 year visa**.

## TECHNICAL SKILLS

**Languages & Frameworks:** SQL, Python, Typescript, React, Next.js

**DevOps:** CI/CD, Docker, Bash, Bazel, AWS SAA Certified (SAAC02)

**Data Management:** (Py)Spark, ETL pipelines, dbt, Snowflake, FiveTran, PostgreSQL

**Data Science:** pandas & dask, PyTorch, matplotlib, seaborn, scikit-learn, OpenAI APIs

## EXPERIENCE

### Software Engineer

Feb 2021 – Present

*ChipperCash*

*Los Angeles, USA*

- Implemented an ELT batch pipeline for computing user risk rating using Python, pandas (dask) & dbt models processing 10M+ rows in ~2 hours and providing analysts with fresh data in Snowflake.
- Deployed ML models for inference as a microservice using Flask REST APIs, served over an event-driven architecture using RabbitMQ that handled >1000 requests per minute.
- Optimized data loads from Snowflake using Apache Arrow, which sped up pipeline speeds by up-to 10x and decreased credit usage up-to 16x.
- Set up dbt for the analytics function which facilitated higher quality and faster data, for usage in upstream reporting tools like Looker & Tableau.
- Devised an automated Python data pipeline that declined up to 100 chargebacks per minute, thereby saving 200 hours of manual labor and preventing potential losses of ~\$4M.
- Collaborated with PMs and Marketing to build a full-stack in-app messaging system, spanning React Native screens in the Mobile App, to backend REST APIs with TypeScript - thereby saving ~\$80k/year by phasing out vendors.

### Data Engineer

May 2020 – Dec 2020

*Data Sleek*

*Los Angeles, USA*

- Collaborated with 5+ clients to design, translate and implement business requirements into a technical spec.
- Delivered SQL stored procedures that perform analytical queries to detect and alert customers for changes in desired metrics, saving up to 20% of the base cost per item.
- Performed benchmark tests for several SingleStore configurations to determine optimal configuration for Time Series data, saving \$475/year while improving performance by 400%.

### Software Engineer Intern

May 2018 – July 2018

*Samsung Research*

*Bengaluru, India*

- Set up Open Network Automation Platform on a local server on top of Openstack, using docker containers, laying the foundation for dynamically scalable ML applications based on resource requirements.
- Upgraded the ETL pipeline by deploying to Apache Kafka for streaming data to the microservice.

## EDUCATION

### University of California, Los Angeles

Sep 2019 – Dec 2020

*Masters of Science in Business Analytics*

*Los Angeles, USA*

### College of Engineering Guindy

Jul 2015 – May 2019

*B.S. Computer Science & Engineering*

*Chennai, India*

## PROJECTS

### Youtube Video Search | Python, OpenAI, Next.js, PostgreSQL, Typescript

[github.com/youtube-search](https://github.com/youtube-search)

- Created a website that video-searched podcasts of a popular YouTube channel. Converted raw data into audio and transcribed it using whisper.cpp.
- Used pgvector to store and query embeddings, and generated context summary with gpt-3.5-turbo.

### MyAnimeList CLI | Rust

[github.com/mal](https://github.com/mal)

- Created an interactive CLI client in Rust to list anime based on a user's profile.
- Display detailed information regarding a show by parsing API.
